## Step 1-Select:

- I/O modules - available in a variety of densities and voltage options. Some modules have diagnostic features, individually isolated inputs/outputs or electronic protection.
- interface modules (IFMs) or prewired cables (optional)

## Select SLC 500 I/0 Modules

Digital I/O modules, analog I/O modules, and specialty temperature, counting, process control, and BASIC language modules are available to help you create a custom solution for your application.

1746 Digital I/O modules
Digital I/O modules are available with $4,8,16$, or 32 channels and in a wide variety of I/O voltages (including AC, DC, and TTL). Combination modules with 2 inputs/2 outputs, 4 inputs/ 4 outputs, and 6 inputs $/ 6$ outputs are also available.

Terminals on the $4,8,12$, and 16 -channel modules have self-lifting pressure plates that accept two 14 AWG ( 2 mm 2 ) wires. LED indicators on the front of each module display the status of each I/O point.

32-channel I/O modules are equipped with a 40-pin, MIL-C-83503 type header and a removable wiring connector ( $1746-\mathrm{N} 3$ ). The connector can be assembled with the wire type and length of your choice.

Output modules are available with solid-state AC, solid-state DC, and relay contact type outputs. High current solid-state output modules, catalog numbers 1746-OBP16, 1746OVP16, and 1746-OAP12, have fused commons with a blown fuse LED indication. The

(1) Repeatability is once every $1 \mathrm{~s} @ 30^{\circ} \mathrm{C}\left(86^{\circ} \mathrm{F}\right)$. Repeatability is once every $2 \mathrm{~s} @ 60^{\circ} \mathrm{C}\left(140^{\circ} \mathrm{F}\right)$.
(2) Fast turn-off modules provide fast OFF delay for inductive loads. Comparative OFF delay times for 1746-0B8, 1746-OV8 and fast turn-off modules, when switching Bulletin 100-B110 (24 W sealed) contractor, are: 1746-OB8 and 1746-OV8 modules OFF delay = 152 ms ; fast turn-off modules OFF delay $=47 \mathrm{~ms}$.
(3) Fast off-delay for inductive loads is accomplished with surge suppressors on the 1746-IB6EI, 1746-0BP8 series B and later, 1746-OB16E series B and later, 1746-0BP16, and 1746-OVP16 modules. A suppressor at the load is not needed unless another contact is connected in series. If this is the case, a 1 N4004 diode should be reverse-wired across the load. This defeats the fast turn-off feature.
(4) An external fuse can be used to protect this module from short circuits. Recommended fuse is SANO MO 4-3.15 A, $5 \times 20 \mathrm{~mm}$.
(5) The 1746-OBP16 module features a fused common and blown fuse LED indicator.

## Power Supply Worksheet Example

## Procedure

1. For each slot of the chassis that contains a module, list the slot number, catalog number of module, and its 5 V and 24 V maximum currents. Also include the power consumption of any peripheral devices that may be connected to the processor other than a DTAM, HHT, or PIC - the power consumption of these devices is accounted for in the power consumption of the processor.
