

HOT CHAMBER HOLE PUNCH

The Hot Chamber Punch (HCP) provides increased hanger hole strength over mechanical punches, and can lower your film costs. HCP is widely used in the packaging industry for punching strong, neat holes in polypropylene bags on vertical baggers. The HCP burns and cauterizes the hole, providing extra strength and helping prevent unnecessary tearing when hung. It works with Lako's standard and MSD Seal Jaws.

BENEFITS

- Annealing the area around the hole increases its strength
(Lighter, less expensive film can be used)
- Eliminates heat transfer from the punch to the seal jaw
(No hot spots in the seal area)
- The center of the hole stays attached to the bag
- HCP maintains constant punch tip temperature

FULL RADIUS PUNCHES AND ANVILS FOR HORIZONTAL FORM FILL SEAL (HFFS)

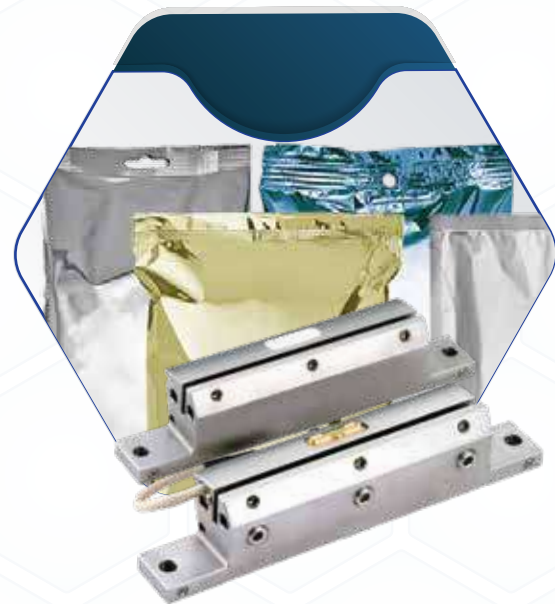

Lako's excellence in manufacturing our tools enables us to offer punches and anvils that avoid the line wear and package hole strength issues of spring-loaded products.

- Lasts 4X's longer than flat-cut OEM punches or spring-loaded punches
- Available in all industry standard sizes
(Butterfly, Delta, Sombrero, and Round)
- Smooth cutting and easy to install and adjust
- Reduces wear and tear on punch and anvil tool

WATERPROOF HOT HOLE PUNCH AND CONTROL

As concerns about food and product safety increase, executives and line managers need to ensure comprehensive wash-downs do not compromise daily operations.

IP55 Waterproof Hot Hole Punch for Vertical Form Fill Seal Baggers to withstands wash-downs without having to be removed.

INVENTORY RE-STOCK PROGRAM

LAKO TOOL stocks many common parts for fast replacements, and also offers custom re-stocking programs to avoid any downtime.
