Features of Induction Motors

● Optimal for Uni-Directional and Continuous Operation

Induction motors are optimal for uni-directional and continuous operation such as a conveyor system.

● Easy Operation

All you need is to connect a capacitor and plug the motor into an AC power supply and the motor can be easily operated. (No capacitor is needed for a three-phase motor.)

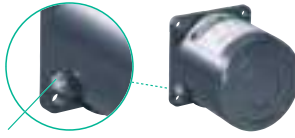

● Extensive Lineup

The World **K** Series and **BH** Series are available. We have models with an output power range of 1 W (1/750 HP) to 200 W (1/4 HP), so you can find a motor that meets your specific application.

● Compatible with Various Gearheads

Combination with a gearhead allows the motor speed to be reduced to the required speed or generate higher torque.

Features of Induction Motors

● Optimal for Uni-Directional and Continuous Operation

Induction motors are optimal for uni-directional and continuous operation such as a conveyor system.

● Easy Operation

All you need is to connect a capacitor and plug the motor into an AC power supply and the motor can be easily operated. (No capacitor is needed for a three-phase motor.)

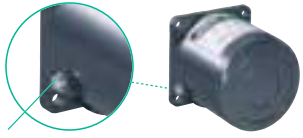

● Extensive Lineup

The World **K** Series and **BH** Series are available. We have models with an output power range of 1 W (1/750 HP) to 200 W (1/4 HP), so you can find a motor that meets your specific application.

● Compatible with Various Gearheads

Combination with a gearhead allows the motor speed to be reduced to the required speed or generate higher torque.

Features of Gearheads

Easy Speed Reduction and Torque Increase

Combination with a gearhead allows the motor speed to be reduced to the required speed or generate higher torque.

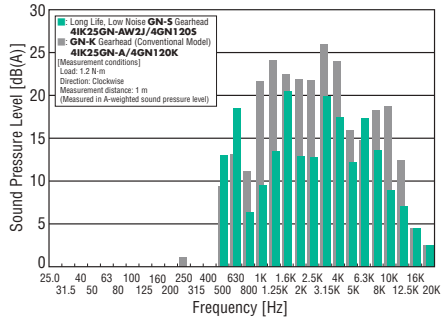

Wide Variety of Products

Gearheads come in various types including the long life, low noise gearhead and right-angle gearhead. Most gearheads are available with 20 different gear ratios from 3:1 to 180:1.

- Combine gearheads with a pinion shaft type motor.
- Gearheads of World **K** Series are sold separately.
- **BH** Series comes with the gearhead pre-assembled.

Gearmotor – Torque Table

- Enter the gear ratio in the box (□) within the gearhead model name.
- A colored background (□) indicates gear shaft rotation in the same direction as the motor shaft, while the others rotate in the opposite direction.
- The speed is calculated by dividing the motor's synchronous speed (4-pole type; 60 Hz: 1800 r/min, 2-pole type; 60 Hz: 3600 r/min) by the gear ratio. The actual speed is 2~33% less than the displayed value, depending on the load.

Gearmotor – Torque Table

- Enter the code that represents the terminal box type "T" in the box (□) within the motor model name.
- Enter the gear ratio in the box (□) within the gearhead model name.
- A colored background (□) indicates gear shaft rotation in the same direction as the motor shaft, while the others rotate in the opposite direction.
- The speed is calculated by dividing the motor's synchronous speed (50 Hz: 1500 r/min, 60 Hz: 1800 r/min) by the gear ratio. The actual speed is 2~20% less than the displayed value, depending on the load.
- To reduce the speed beyond the gear ratio in the table, attach a decimal gearhead (gear ratio 10:1) between the gearhead and the motor. In that case, the permissible torque is 10 N·m (88 lb-in).

Gearmotor – Torque Table

- Enter the code that represents the terminal box type "T" in the box (□) within the motor model name.
- Enter the gear ratio in the box (□) within the gearhead model name.
- A colored background (□) indicates gear shaft rotation in the same direction as the motor shaft, while the others rotate in the opposite direction.
- The speed is calculated by dividing the motor's synchronous speed (50 Hz: 1500 r/min, 60 Hz: 1800 r/min) by the gear ratio. The actual speed is 2~20% less than the displayed value, depending on the load.
- To reduce the speed beyond the gear ratio in the table, attach a decimal gearhead (gear ratio 10:1) between the gearhead and the motor. In that case, the permissible torque is 20 N·m (177 lb-in).

*1 Single-Phase 220 VAC 50Hz type is not available for conduit box type.

*2 Conduit box type is not certified under the China Compulsory Certification System (CCC System).

(TP): Contains a built-in thermal protector (automatic return type). If a motor overheats for any reason, the thermal protector is activated and the motor is stopped.
When the motor temperature drops, the thermal protector closes and the motor restarts. Be sure to turn the motor power off before inspecting.

■ Gearmotor – Torque Table for Combination Type

- Enter the code that represents the terminal box type “T” in the box (□) within the model name.
- Enter the gear ratio in the box (□) within the model name.
- A colored background (□) indicates gear shaft rotation in the same direction as the motor shaft, while the others rotate in the opposite direction.
- The speed is calculated by dividing the motor's synchronous speed (50 Hz: 1500 r/min, 60 Hz: 1800 r/min) by the gear ratio.
 The actual speed is 2~20% less than the displayed value, depending on the load.
- Decimal gearheads are not available for the **BH** series.

● The **U** and **E** at the end of the model name indicate that the unit includes a capacitor. These letters are not listed on the motor nameplate. When the motor is approved under various safety standards, the model name on the nameplate is the approved model name. → Page H-11

● Details of safety standards → Page H-2

TP: Contains a built-in thermal protector (automatic return type). If a motor overheats for any reason, the thermal protector is activated and the motor is stopped. When the motor temperature drops, the thermal protector closes and the motor restarts. Be sure to turn the motor power off before inspecting.

Note

- Change the direction of single-phase motor rotation only after bringing the motor to a stop. If an attempt is made to change the direction of rotation while the motor is rotating, motor may ignore reversing command or change its direction of rotation after some delay.
